FALL SAFE CATALOGUE 2020/2021

THERE ARE NO EXCUSES. IT'S YOUR WORK, IT'S OUR SOLUTION.

We could go on and on, but that truly is what our team looks after when designing a product. That's why before you start, we would like to give you some inputs:

You will find the icon index, size chart and color chart in the flap at the end of the catalogue. Not every size or connector combination is presented, but you can always contact us for more information. Always read carefully the product general and specific instruction manual before using any of FALL SAFE® products.

If you would like to give us your feedback, feel free to do so. We will be very happy to hear from you!

OUR SOFTWARE

NEW CROC™ PADDING 2.0

Direct airflow system
Lightweight
Ergonomic support at pressure points
Integrated reflective

THREADS AND STITCHES

Double heavy duty stitch
High tenacity polyester thread grade 10 (180N)
Both PRO and BASIC range

WEBBING

PROFESSIONAL
Water repellent webbing
- Abrasion and moisture resistant. PES > 32 kN.
Heavy duty 44 mm

BASIC
Easy orientation - Black and orange webbing.
PES > 28 kN.
Medium duty 45 mm

KEVLAR®, NOMEX®
Webbing for high temperature, high strength. PES > 35 kN
Heavy duty 45 mm

BIOTHANE®
Coated webbing for heavy duty applications.
PES > 35 kN
Heavy duty 45 mm

ATEX
Suitable for explosive atmospheres. PES/carbon > 26 kN
Heavy duty 45 mm

YOUR WORK OUR SOLUTION

ABOUT US

Quality. Efficiency. Comfort. Social awareness.

Those are the principles that define us. Since the beginning, we are oriented to the development and production of innovative and excellent products.

We want to be recognized in the world market by users of safety and personal protection equipment, for the quality, safety, comfort of our products and offer technological solutions that generate value for the user.

Therefore, FALL SAFE® isn't just a PPE manufacture company.

We invest in people, technology and services with the trademark FALL SAFE® , FALL SAFE TRAINING® and FALL SAFE INSPECTOR®.

WHERE TO FIND US

You have known us for more than a decade and we are sure you can recognize our logotype as well as we do. But, as you probably know too, we like to “shake things up”!

From now on, you may find this monogram in our newsletters, catalogues and products.

But we are still FALL SAFE® and we will be using our original logotype too. It won't change anything on the product or our communication, much less in our brand.

DESIGN & INVESTIGATION

FALL SAFE® is an internationally certified company on the standards ISO9001:2015 and EU Regulation 2016/425.

We are aware of what our products stand for on the everyday of workers, using well defined and structured both productive and administrative processes on our quality manual.

Due to its geographical location, FALL SAFE® relies on support given by third party entities, with technological purposes, cooperating in the development of new products, and improving production processes. FALL SAFE® has been continuously improving all its machinery and applied technologies, investing in greater quality control.

QUALITY TESTS

FALL SAFE® products follow a rigorous process before being made available to the customer. Likewise, that process is based on many years of expertise, field investigation, stringent guidelines and high quality demands.

We take great care when selecting high quality raw-material. Our Quality Control Laboratory tests a wide range of materials, products and components to support FALL SAFE® quality requirements using modern testing machines.

The quality testing laboratories test to international and other recognized fall protection standards.

DROP TEST TOWER

At FALL SAFE® we want to be recognized for our highest-quality, before anything else.

That's what our costumers and partners expect from us, and we go out of our way to deliver it.

This includes not only how we develop our products, but also how we manufacture and release them to our customers. Our process always include an exhaustive battery of tests and rigorous inspection processes to ensure our products exceed EN – European standards and ANSI/OSHA – American Standards. To achieve that, we use a drop test tower, which is located at our state-of-the-art test center.

CUSTOMER SERVICE MANAGING RELATIONSHIPS

We're committed to ensure that our products and services meet your expectations.

We are delighted to hear when we are doing well, but we also need to know what we can do better. If you would like to compliment us or have a suggestion on how we can improve, we want to know. If we make a mistake, or our service does not meet your expectations, we want to know.

Our team is always happy to hear from you and will always do the best they can to serve you better each time.

FALL SAFE TRAINING®

OPTIMAL TRAINING CONDITIONS

We are proud to say our training center is based on the principles of working at heights. It can easily respond to the demands of everyday's work through simulation areas.

The space was built around a 8 meter high structure, a confined space and a 7 meter high tower. With all the necessary equipment, all the environment was designed for training courses such as access to structures or rope access, access to confined spaces and access to telecommunication towers.

Training is an investment with benefits not only for the workers but also for employers. That is why we have been developing a wide range of training courses with the aim of providing each attendant involved with the practical and theoretical knowledge needed to perform their work safely.

TRAINING CATALOGUE

A training program is an instrument that aims at improving employee skills, which will enable the company to meet its objectives and establish more ambitious ones.

Contact us if you need a program with specific contents adapted to your organization or check out our catalogue training courses and choose the one that fits your needs:

FALL SAFE® Competent Person

Learn the current periodic examination requirements, recommendations and instructions issued by manufacturers applicable to PPE against falls from a height.

Metallic Structures

Learn and train the appropriate manoeuvres to safely access and work in metallic structures.

Telecommunication Towers

Learn how to use PPE in a safe manner and deal with the access and rescue from towers and other tall structures.

Confined Spaces

Learn how to act safely when accessing a confined space, that can reveal itself extremely dangerous and even deadly.

Rope Access

Learn how to descend, ascend and traverse ropes in order to access and work in pure suspension.

Work and Rescue in Wind Turbines

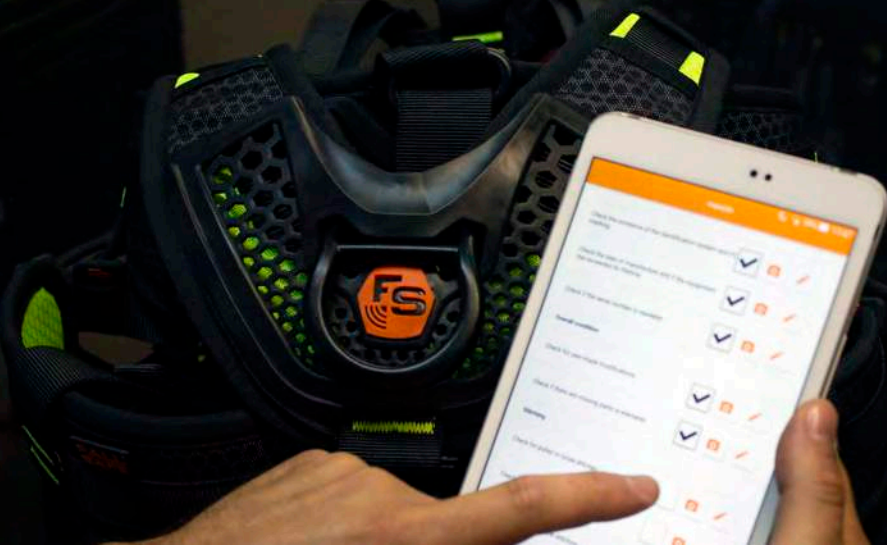

The contents of this training is directed to learn safe procedures when working in wind turbines where the aim is to apply the first response procedures in an emergency.

Roof Work

Learn safe working practices on roofs and how to make safe anchor points.

FALL SAFE® Competent Seller

Increase your competency and improve your after sales service.

THE NEW PPE MANAGEMENT APP BY FALL SAFE®

OUR SOLUTION

Aware of the increasingly rigorous regulations on the personal protective equipment use, management and maintenance, FALL SAFE® developed a new and unique PPE app.

FALL SAFE INSPECTOR® truly goes beyond everything just to give its user better functionalities and management options. More complete than ever, INSPECTOR® is now not only an app for the inspector, but a system for anyone using, inspecting, maintaining or even purchasing PPE. Following the new PPE Regulation (EU) 2016/425, we decided we would allow the system to be a must have when it comes to tracking the PPE.

AVAILABLE FOR

THE 3 MANAGEMENT MODULES:

ICHECK

If you are an inspector we have specially designed INSPECTOR® ICHECK for you. Besides allowing you to inspect the equipment with preloaded checklists, the app shows you all you have to know about your PPE.

ICONTROL

For the distributor, we developed INSPECTOR® ICONTROL, a document management system, giving you access to all the invoices, customers, purchases and sales, PPE in warehouse and a lot of other possibilities.

IGEST

If you are a health and safety technician or engineer, if you bought equipment or if you simply need to keep your PPE on track, INSPECTOR® IGEST is the right for you, allowing you to do all of it.

DISCOVER INSPECTOR®

FALL SAFE INSPECTOR® is available for iOS, Android and through a link. While IGest and IControl give the user the background on every product he owns, ICheck allows mobility while performing an inspection.

Document Management modules that work via link can be integrated with the app for your smartphone.

HOW DOES ICHECK WORKS?

- 1 - Read the RFID on your FALL SAFE® PPE using your smartphone.
- 2 - Proceed to inspect the equipment, schedule an inspection, search more about that PPE (documentation, reports) or simply update information.

1

2

Some FALL SAFE® equipment don't have RFID, for example our BASIC range. This allows us to maintain an attractive price for the customer. In this case, our PPE has a QR Code, that can as well be read.

If you have equipment from another brand, you can simply register it by the serial number, manually, and proceed as usual.

LIFELINE SYSTEMS

SUPPLY, INSTALLATION, CERTIFICATION AND INSPECTION OF LIFELINES

In order to complement the offer of safety equipment for work at height, FALL SAFE® integrates an engineering department dedicated to the supply, installation, certification and inspection of lifelines and anchor points.

We have horizontal and vertical lifeline options in stainless steel cable and aluminum rail covering every possible scenario.

AUTHORIZED INSTALLERS, TECHNICIANS, TRAINERS AND INSPECTORS

At FALL SAFE® we have a team of certified technicians to install, maintain and certify lifelines. This way, we are able to present a complete solution to our customer and guarantee support in any situation.

In addition to the supply, installation, certification and inspection of lifelines, we are able to provide our customer with training in the use and maintenance of the equipment.

FALL SAFE® GUARANTEED QUALITY

We are able to guarantee the quality of our lifeline services thanks to our ISO9001:2015 certified Quality System.

FALL SAFE® can assure the quality of every service provided to the customer.

FALL SAFE® ROPES

KEY FEATURES AND BENEFITS

The highest quality yarns, the stringent quality control process and the high proportion of sheath to cover ratio improves protection from abrasion and reduce sheath slippage.

Our ropes benefits and features:

- Exceed requirements of EN1891
- Both type A and B
- Low stretch kernmantel
- Excellent handling and knot holding characteristics
- High abrasion resistance
- Hard wearing and high strength
- Excellent UV protection
- Max. life span of 10 years
- Compatibility with hardware nylon yarns
- Low extension and low shrinkage strong and durable
- Traceability system
- Low extension during normal working procedure but capacity to withstand forces generated by a fall

ROPE Technora® Ø5 MM

FALL SAFE® FS905 Saveman™ Advance is a small and compact rescue descender equipment with anti-panic function. It is easy to carry and install on the harness. For extra safety it incorporates a energy absorber in the device so overload of rope is not possible. The Technora® rope is the strongest aramid fibre existing and has a very high heat and chemical resistance.

ARREST

REFERENCE	FS933	FS934	FS936
SIZE	7,50 M	10 M	15 M
WEIGHT	3,028 KG	4,225 KG	6,618 KG
EAN	5605423460421	5605423460445	5605423460452

- Rotatable swivel on snap hook included to prevent lifeline from twisting
- Resistant to damp, heat, cold, corrosion
- Tested for one person, 136 kg

FEATURES

MAX LOAD TESTED 136 KG (1 person use)

CE EN360

MATERIAL

HOUSING High-strength polymer

CABLE 4.5 MM Galvazed steel cable

BASIC BLOCKS SHARP EDGE

FS933E | FS934E | FS936E

PROFESSIONAL

OK!

CABLE 4.5 MM Galvazed steel cable

FS932

FALL ARREST BLOCK

PROFESSIONAL

SIZE	7 M
WEIGHT	2,10 KG
EAN	5605423800609

- High functional retractable block
- Low weight thanks to the using of extra light plastic
- Tested for one person

FEATURES

MAX LOAD TESTED	136 KG (1 person use)
-----------------	-----------------------

CE	EN360
----	-------

MATERIAL

HOUSING	High-strength polymer
---------	-----------------------

CABLE	Dyneema® cut resistant webbing
-------	--------------------------------

FS931 SERIES

FS931-BC | FS931-TB | FS931-TC

PROFESSIONAL

SIZE	3,0 M	3,0 M	3,0 M
WEIGHT	2,516 KG	2,446 KG	1,895 KG
EAN	5605423801118	5605423801132	5605423801125

- Rotational swivel
- Fall indicators for safer checks

FEATURES

MAX LOAD	140 KG (1 person use)
----------	-----------------------

CE	EN360
----	-------

MATERIAL

HOUSING	Impact resistant glass filled nylon
---------	-------------------------------------

CHASSIS	Stainless and carbon steel
---------	----------------------------

WEBBING	Dyneema® abrasion resistant webbing
---------	-------------------------------------

FS919

TWIN BRACKET

PROFESSIONAL

WEIGHT	0,131 KG
EAN	5605423000689

FEATURES

MATERIAL	Stainless steel

THE FALL FACTOR

Fall factor is a rating used to evaluate the danger of specific scenarios when working at heights. Fall Factor is calculated using the following equation:

$$\text{FALL FACTOR} = \text{HEIGHT OF FALL} / \text{LENGTH OF LANYARD}$$

In situations where the Fall Factor will be 0 (e.g. the worker is positioned under the anchor point on a tensioned lanyard) or in situations where the Fall Factor is 1 or less and the freedom of movement is limited to 0.6 m or less, positioning equipment is adequate.

Fall arrest equipment must be used for other situations where the Fall Factor is greater than 1 or more freedom of movement is required.

Systems involving Fall Factors include:

Restraint

Technique used to prevent a worker from entering a fall risk area (e.g. positioning harness and lanyard EN 358).

Positioning

Technique used to position a worker securely in a fall risk area without creating a Fall Factor scenario (e.g. hanging beneath an anchor point in a positioning harness on a tensioned lanyard EN 358).

Fall Arrest

Technique used to catch and reduce securely in a fall risk area without creating a Fall Factor scenario (e.g. hanging beneath an anchor point in a positioning harness on a tensioned lanyard EN 358).

FALL ARREST

Mind the following when using Fall Arrest systems:

- Energy absorbing lanyards must not exceed 2 meters in length (including connectors);
- The maximum extended length for the new Energy;
- Absorber has 1,5m;
- The length of a potential fall must always be minimized with the proper gear and rigging;
- The possibility of a worker hitting something during a fall must be eliminated
- Avoid systems that could create a Fall Factor greater than 2
- Calculate the clearance distance below the anchor point to ensure that worker cannot hit the ground:

$$\text{Clearance Distance} = A + B + C + D$$

A - Lanyard length

B - Energy absorber extension

C - Distance between harness attachment and worker's feet, 1,5 m

D - Safe distance from the ground, 1 m

ICON FINDER

Tell us what you do, we'll tell you what you need.

FALL SAFE® develops its products always keeping on mind real life situations and works. So we are guided by our motto **YOUR WORK. OUR SOLUTION.**, that helps us identifying our customers needs and daily risks. You can find one or more of the following icons in any product, which allow you to find exactly what you are looking for.

	Access platforms		Points of adjustment/buckles from 1 to 12
	Arborist		Fall arrest indicator
	Confined spaces		QR Code tag ID INSPECTOR® ready
	Construction		RFID tag ID INSPECTOR® ready
	Offshore		Suitable for extreme environment/ ready for specific situations
	Rescue		Extreme environment: Flames, fire, welding processes
	Riggers		Extreme environment: Tough and dirty spaces, works
	Roof works		Extreme environment: High voltage electricity
	Rope access		Direct air flow through breathable materials
	Scaffolding		Extreme environment: ATEX tested
	Telecom		Tested in a horizontal application over a sharp edge $r \geq 0,5 \text{ mm}$
	Tower climbing		Heavy weight - tested for 136 KG
	Wind turbine		Heavy weight - tested for 140 KG Appl. to all PRO harnesses
	Wood poles		Risk of death
	10 Colour orange		Attention!
	15 Colour lime		CE Certified
	20 Colour orange high visibility		For occasional use
	30 Colour lime high visibility		For frequent use
	40 Colour orange anti-flame		For intense use
	55 Colour black
