EXCLUSIVE

STEITZ

VITAL BACK SYSTEM

FOOT CLIMATE TECHNOLOGY

FITTING SYSTEM

THE SECURA VARIO® SYSTEM.

The protection of your back starts at the extreme end of the body – the heel. Our heel shock absorption, which is exchangeable and individually tailored to the weight and the stress of the wearer, can reduce the pressure load in the shoe to a natural level. The feet tire less quickly, and in addition, the locomotor system is sensibly discharged. The five weight modules can be easily exchanged by the wearer and can therefore always be adapted to the weight. Their geometry is shaped in such a manner that a loss of effectiveness is almost excluded.

ABOUT

AMAZINGLY SIMPLE. PROVEN MILLIONS OF TIMES.

The unique and highly effective SECURA VARIO® system offers a significant stress relief for the muscles in the locomotor system.

DEVELOPED WITH PASSION. SCIENTIFICALLY TESTED.

THE SECURA VARIO® HEEL SHOCK ABSORPTION.

The positive effects of the SECURA VARIO® heel shock absorption have been proven in a scientific study at the University Hospital of Jena.

A summary of the study can be ordered at info@steitzsecura.com.

EXCLUSIVE

STEITZ

VITAL BACK SYSTEM FOOT CLIMATE TECHNOLOGY FITTING SYSTEM

PROTECTION FROM ANKLE TWISTING – NATURALLY IMPROVED.

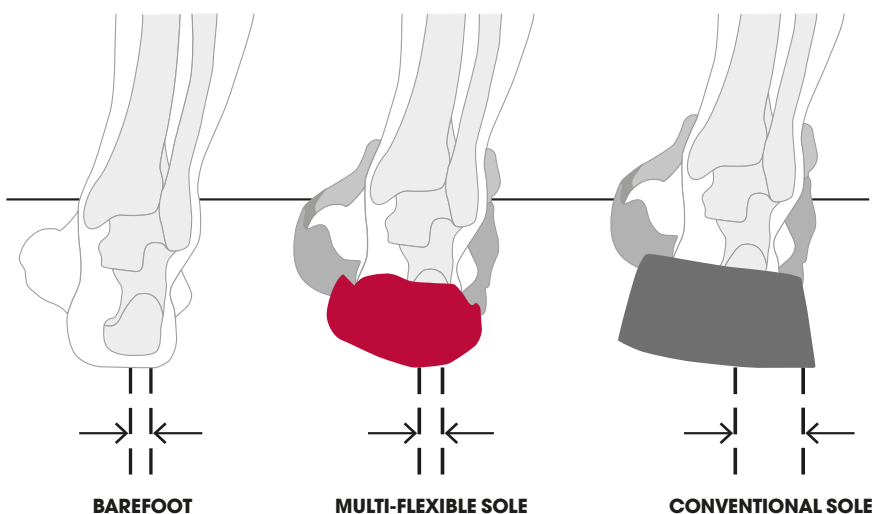

In view of the period of his evolution, man has only recently started to protect his feet with shoes. However, the imposed and hardly variable position in a conventional shoe influences the natural movement of the foot.

The landing foot slightly rolls inward to evenly spread the impact forces. This natural movement is called pronation. If the foot rolls inward more than normal, this is called overpronation. If, on the other side, the foot rolls outward, this is called supination.

Initially, shoe concepts aimed at correcting overpronation or supination. A neutral way of walking was supposed to better coordinate the walking movement with the rest of the body and minimize the risk of accidents. Today, we know that individual pronation patterns cannot be changed automatically. Therefore, modern shoe concepts intervene as little as possible in the natural course of movement. To minimize the risk of accidents, the maximal pronation is less relevant than the force with which the foot is pushed into this pronation movement.

With flexible sole materials and an intelligent heel and outsole conception, we avoid negative, force-increasing influences in our safety shoes. Slow and regular force changes support the natural course of movement.

OUR INNOVATIVE CONCEPT FOR PREVENTION: INTELLIGENT REDUCTION OF LEVER ARMS.

As with a pulley, conventional outsoles increase the force impact on the biological structures of the foot and the core muscles.

The conception of heel and outsole in connection with flexible materials makes sure that these force vectors, so-called lever arms, are hardly greater than when walking barefoot. This means that your performance capacity is actively maintained. STEITZ SECURA has integrated these insights in its ergonomic concept in cooperation with Prof. Dr. Markus Walther, Medical Director & Chief Physician of Schön Klinik München Harlaching.

VARIO MULTIFLEX®.

CLOSE TO THE BAREFOOT FEELING.

The locomotor system is configured to a load corresponding to the barefoot situation. On one hand, the Multiflex technology operates to compensate the difference between the natural floor and hard industry floors, and on the other hand to achieve maximum flexibility where the foot is most flexible as well: at the level of the metatarso-phalangeal joints. Here, the soft cushioning of the forefoot protects from the occurrence of forefoot problems, in particular with increasing age.

Conventional

Multiflex Technology

Pressure distribution in the shoe (red = high pressure load)

Discharges the pressure-sensitive forefoot

The heel shock absorption provides targeted relief for the back

MULTIFLEX TECHNOLOGY.

FOR THE EXTRA MILE.

The Multiflex technology is the combination of stress-adapted heel shock absorption and effective forefoot damping.

The individually coordinated damping helps to optimally steer the pretension of the muscles and to avoid peak loads, in particular overloads.

EXCLUSIVE

STEITZ

VITAL BACK SYSTEM FOOT CLIMATE TECHNOLOGY FITTING SYSTEM

COMMITMENT TO PERFECTION.

STEITZ SECURA's safety shoes are technological masterpieces. All current models are lever-arm-reduced, most of them have multizone and heel damping as standard. In addition, there are individual features for different uses and sectors. Particularly light, particularly surefooted or slip-resistant, particularly flexible – our safety shoes correspond to the requirements of the respective job. Therefore, in our model range, you will find safety shoes for allround uses, heavy-duty models with optional midfoot protection and protection from electro-static discharge, special shoes for casters and welders, waterproof shoes, Emergency Services Collection, Specially designed ladies range, clinical areas white range, metal free shoes and much more.

Most people are on their feet all day to give the maximum performance to their job, this can often result in back problems, the feet are aching, and maybe, even severe symptoms arise. Indeed, locomotor disorders are among the most frequent causes of sick leaves at work. Nobody needs them in his private life either. Take farewell from your back pain: Help prevent this by wearing the correct shoes!

Safety shoes are like tools. First you think: „To start with, it does not have to be anything special. As long as it holds for a while and fulfills its purpose.“ Then you realize that it is in fact very strenuous with the wrong equipment. With tools that do not function properly or with safety shoes that do not fit correctly. That start to pinch after a few hours, provide no comfort – and that you want to take off your shoes as quickly as possible after work.

The insight: as a professional, you should not only work with the best tools, but also enjoy optimal safety shoes. After all, you stand and walk in them all day long and still want to be comfortable after hours. The right safety shoes are the ones that you do not feel and that you would still keep on even after a tough day. A partner who helps to do the job well and to stay healthy and fit. Back troubles have no chance then.

This means: your shoe should adapt to you, not vice versa. That's exactly how STEITZ SECURA safety shoes function. Our multi-width system enables every foot, even if thin or extra-wide, to fit into the shoe and find stability there.

The weight-dependent SECURA VARIO® heel shock absorption reduces pressure stress in the shoe, provides targeted relief for the back and reduces fatigue symptoms. And the multi-zone damping VARIO MULTIFLEX® additionally discharges the forefoot.

Megatrend prevention: it has long been a motivation and passion for us

No chance for pain: in the development of our safety shoes, we pay particular attention to the prevention of complaints. This premature action avoids pains and their therapy – for healthy, motivated employees with less days of absence. For the most frequent cause of times of sick leave in the industrialized nations are muscle-skeletal affections, in particular back pains.

„For the prevention and treatment of back pain, ergonomically correct products are an important, but often neglected factor. According to a survey among 1000 orthopedists, 96 % of the respondents therefore even recommend to their patients the targeted purchase of ergonomically sound products, in particular if they bear the AGR quality label.“ A statement from Aktion Gesunder Rücken e.V..

STEITZ SECURA's safety shoes are the only ones that are recommended by AGR as particularly healthy for the back. We know: the prevention of back problems starts with the right shoes. They do not only have to fit the wearer like a glove, but be also adapted to the respective use. With our vital back system, we have developed a preventively effective concept in which the focus lies on the complete locomotor system with its neuronal control. It is crucial in this context that the effect is maintained throughout almost the entire lifetime of our safety shoes.

We have been working with experts from medicine and science for years and subject our safety shoes and their mechanisms of action to the strictest test criteria, which go far beyond the required norms. That is the only way for us to gain well-founded insights for the benefit of the future wearer.

TESTED AND APPRECIATED:

The association Aktion Gesunder Rücken e. V. has awarded the quality label of Aktion Gesunder Rücken as particularly back-saving to the SECURA VARIO® system. This makes us proud, for Aktion Gesunder Rücken e. V. has developed strict criteria for that and closely cooperates with physicians, health insurance funds and the main professional associations. Our safety shoes with the SECURA VARIO® system are the only ones that fulfill their strict requirements!

Tested and recommended by the forum Gesunder Rücken - besser leben e.V. and the Federal Association of German Back Training Schools (Bundesverband deutscher Rückenschulen (BdR) e.V.). Additional information at: AGR e.V. - Stader Str. 6 - 27432 Bremervörde Tel. +49 (0)4761/92 63 580 - www.agr-ev.de

CONTROLLING CLIMATE, PR YOUR FEET.

EXCLUSIVE

STEITZ

VITAL BACK SYSTEM
FOOT CLIMATE TECHNOLOGY
FITTING SYSTEM

CLIMATE COMFORT.

FOR PERFECTLY TEMPERED FEET.

The foot climate technology ensures that you do not get too cold or too hot in your shoes. High-quality leathers, microfiber and lining materials, in connection with the reduction of glues, provide a high breathing activity. In addition, we use GORE-TEX as climate membrane in many models. The core of the STEITZ foot climate technology is the internal leather insole. It consists of vegetable tanned leather and individually adapts to the foot. With its skin-friendly pH-value, it supports the climate comfort. It does not only store the humidity in the shoe, but can also reevaporate that humidity outward very quickly after the end of shift. So you always feel well in your shoe. Without any heat accumulation. Without sweating. Simply a perfect climate.

THE OTECTING

Our aim is to develop safety shoes that convey not only foot protection, but also a comfortable and healthy feeling to the wearer. For this sake, we search for modern materials and consciously renounce to full-area adhesions in construction.

High-quality leather and microfiber materials and new breathable functional linings provide a dry wearing sensation.

An extra-class comfort.

EXCELLENCE IN TECHNOLOGY

EXCLUSIVE STEITZ VITAL BACK SYSTEM FOOT CLIMATE TECHNOLOGY FITTING SYSTEM

98 percent of the population in the industrial nations are born with healthy feet – however, many adults later suffer from foot problems and the resulting complaints in the locomotor system.

So what has happened on the way? An important factor is the fact that many people wear the wrong shoes. This means that the large majority contents itself with incorrectly fitting shoes, that are too tight or too wide, too big or too small. Few people care about that because they do not even know how it feels when a shoe really fits well. In case of safety shoes, this can have fatal consequences: if the safety shoe does not provide correct hold. This increases the risk of slips, trips and falls.

On the other side, shoes that are too tight cause forefoot problems, which in turn can cause an instable stance.

If you suddenly try an optimally adapted safety shoe, then there is great enthusiasm. Once a wearer experiences correctly fitting footwear, the results speak for themselves leaving the wearer not wanting to wear anything else.

STEITZ SECURA's fit method is a clever concept for an optimal fit, not only lengthwise, but also in the breadth, and offers the ultimate wearing comfort. This is unique and proven and reduces the risk of ill fitting footwear, returns and also allowing to consolidate the range available to staff.

VARIETY WITH METHOD. STEITZ SECURA'S MULTI-WIDTH SYSTEM.

With the unique STEITZ SECURA multi-width-system, STEITZ SECURA's safety shoes can be individually fitted to the wearer. For almost every shoe model of our current collection, four different widths are available in each shoe length – so there is no obstacle to a perfect fit of the shoe anymore.

ITS THE TECHNOLOGY IN THE FITTING.

THAT MAKES THE DIFFERENCE.

Every foot has a different length and width. This simple insight was the foundation stone of our proven multi-width system.

Normally, a foot length corresponds to a predefined standard width. Only a foot exactly meeting this norm will really feel well in this shoe, and in reality, this is rather rare. It is therefore not useful to reduce foot size only to one linear measure. If the foot is wider or thinner, the shoe does not really fit in its width. For a comfortable width, you would have to choose a shoe that is either much too large or too small. STEITZ SECURA has solved this problem with its multi-width-system. We manufacture almost all models in four different widths per shoe length.

As you can infer from the table, a wearer with a foot width of 107 mm normally (if no multi-width-system exists) selects a shoe with the size 44 because it fits in its width, i. e. is not too tight. However, if such person only has a foot length of 262 mm, i. e. actually a shoe size of 41, the shoe is much too long.

Size (Paris stitch)			Foot length	Food width			
Men	Women	UK		S	NB*	XB	XXB
	35	2	217 mm	85 mm	88 mm	91 mm	94 mm
	36	3	225 mm	88 mm	90 mm	93 mm	96 mm
	37	4	232 mm	90 mm	92 mm	95 mm	98 mm

39	39	6	247 mm	94 mm	97 mm	99 mm	102 mm
40	40	6,5	255 mm	96 mm	99 mm	102 mm	105 mm
STEITZ multi-width system	41	7	262 mm	98 mm	101 mm	104 mm	107 mm
	42	8	270 mm	100 mm	103 mm	106 mm	109 mm
	43	9	277 mm	102 mm	105 mm	108 mm	111 mm
without multi-width system	44	10	285 mm	104 mm	107 mm	110 mm	113 mm
	45	10,5	292 mm	106 mm	109 mm	112 mm	115 mm
	46	11	300 mm	109 mm	112 mm	114 mm	117 mm
	47	12	307 mm	111 mm	114 mm	117 mm	120 mm
	48/49	13	315 mm	113 mm	116 mm	119 mm	122 mm
	50	14	322 mm	115 mm	118 mm	121 mm	124 mm
	51	15	330 mm	117 mm	120 mm	123 mm	126 mm
	52	16	337 mm	119 mm	122 mm	125 mm	128 mm

* NB is the standard width of a shoe without multi-width system

SIMPLE. UNIQUE.

QUICK AND EASY DETERMINATION OF SIZE AND WIDTH WITH STEITZ SECURA'S SHELL MEASURING SYSTEM.

A simple system for a perfect fit: for every shoe size, we hold three-dimensional shells with different widths available, which exactly reflect the inner space of our shoes. The trial fitting succeeds safely and extremely fast and reproduces exactly the feeling you also have when wearing our shoes.

EXCLUSIVE

STEITZ

VITAL BACK SYSTEM FOOT CLIMATE TECHNOLOGY FITTING SYSTEM

THE TRICK WITH THE TWIST.

THE BOA® FIT SYSTEM.

In many uses in the area of safety shoes, laces are an obstacle. Sometimes, they even represent a potential for danger which should not be underestimated. With many of our models, we therefore offer the BOA® FIT SYSTEM.

With a trick towards the perfect fit: the robust construction with steel cable system and a low-friction cable guide allows for lacing in seconds and offering a quick release system.

Also with gloves. The BOA® FIT SYSTEM and STEITZ SECURA shoes. A dream team.

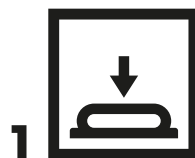

In terms of quality, we accept no compromise. By means of an absolutely reliable construction, the BOA® FIT SYSTEM rejects dirt, oil and ice, so that the wearer never gets disturbed in his/her concentration. This is an important safety aspect for working at height or confined areas, as e. g. on the roof or on scaffolds. And the safety gloves are there to stay.

Hold for a lifetime.

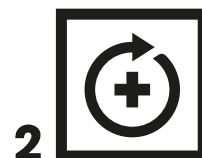

The screw cap and the cable have been tested under the strictest conditions. Just like STEITZ SECURA's shoes.

BOA®

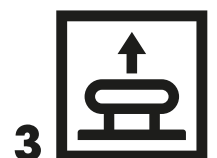

OPERATION.

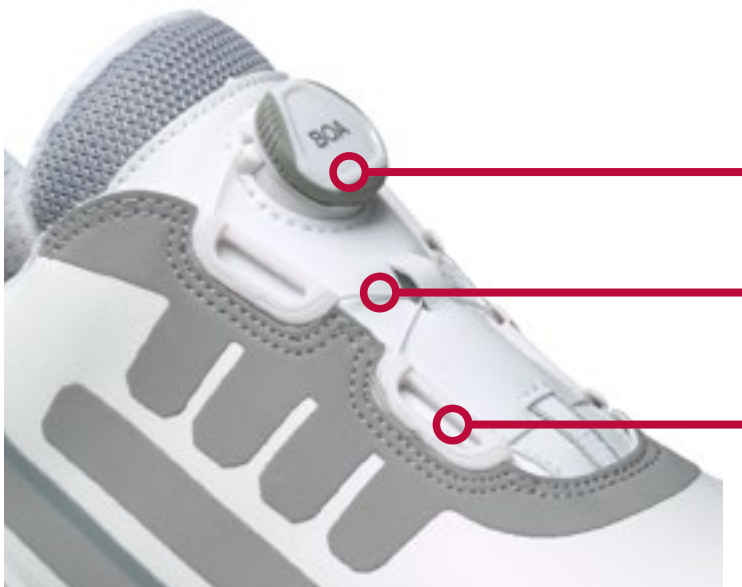

PRESS TO SNAP

TURN TO TIGHTEN

DRAW TO OPEN

SCREW CAP

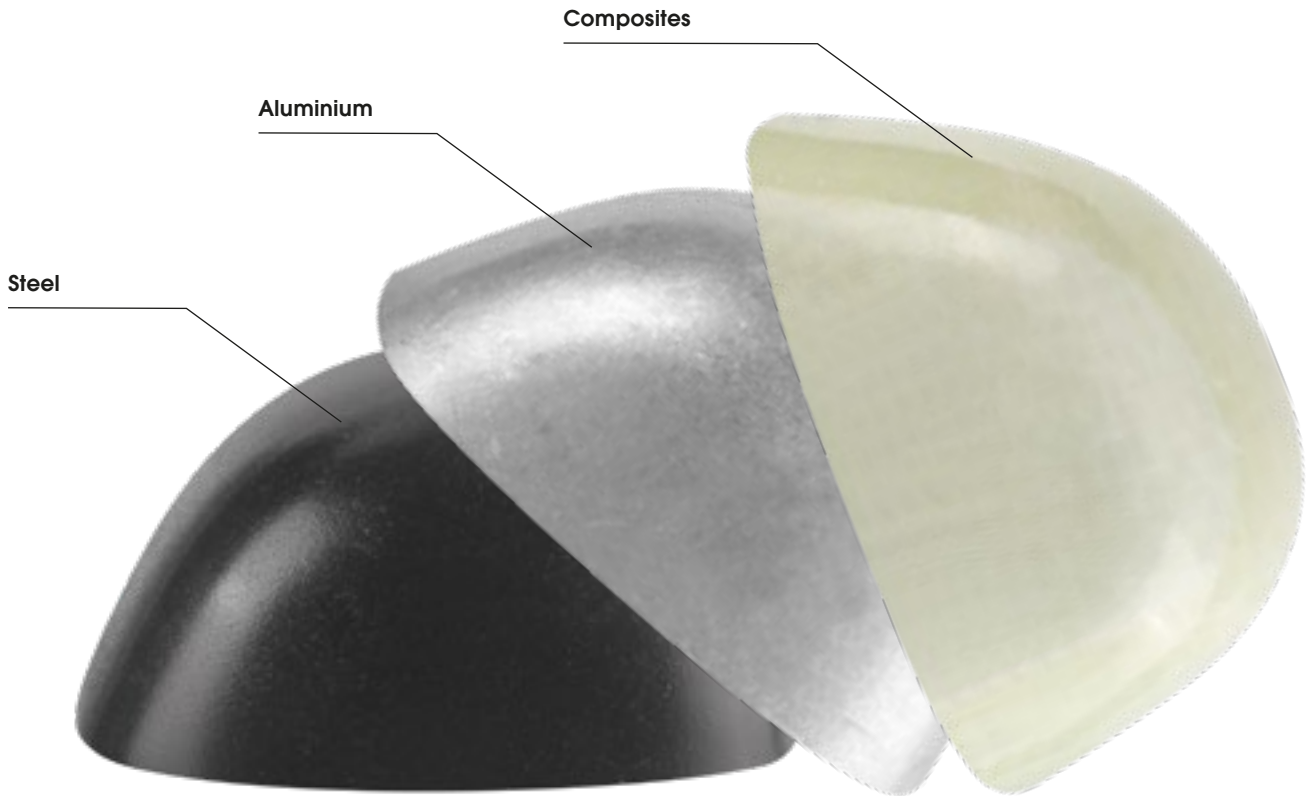

Adapts the fit with precision – click by click.

CABLE

Light, robust and specifically configured for comfort and performance.

CABLE GUIDES

Low-friction cable guides provide for smooth running of the closure.

IT'S THE COMBI.

We understand our fit method as a concertation of single elements based on each other and complementing each other to create a clever system.

After the length and width analysis of the foot by our shell measuring system, the way is paved for a perfectly fitting safety shoe. By means of a sophisticated matrix, the 4 different shoe widths are attributed to their exactly fitting protection caps.

We use three different materials for our protection caps: steel, aluminum and composites. All materials have their defined use. But all protection caps have one thing in common: the asymmetric form.

This form is adapted to the anatomy of the forefoot and considers a. o. the differences between the right and the left foot.

In addition, the subjective sensation of the bearer in the worn shoe is decisive, for no shoe feels like the next. So the mix of materials, solidity, lacing and roll-over behavior play an important role for the subjective feeling if a shoe fits or not.

SAFETY FIRST

THE PPE REGULATION

In its PPE Regulation EU 2016/425, the EU defines three risk categories that are respectively subject to different methods of conformity evaluation. A distinction is made between the following risk groups:

CATEGORY I

Products for the protection from low risks are attributed to this category. For these products, the manufacturer assumes that the user can evaluate the protective function of the PPE himself.

CATEGORY II

These are products offering a standard protection from mechanical risks, e. g. work protective helmets, hearing protection or safety shoes.

CATEGORY III

Category III includes all products protecting from deadly dangers and irreversible harm to health. The PPE of this risk group protects from risks that the user himself cannot evaluate, e. g. risks of aggressive chemicals, breathing in harmful substances or harmful noise. This also includes cutting damage risks when operating saws.

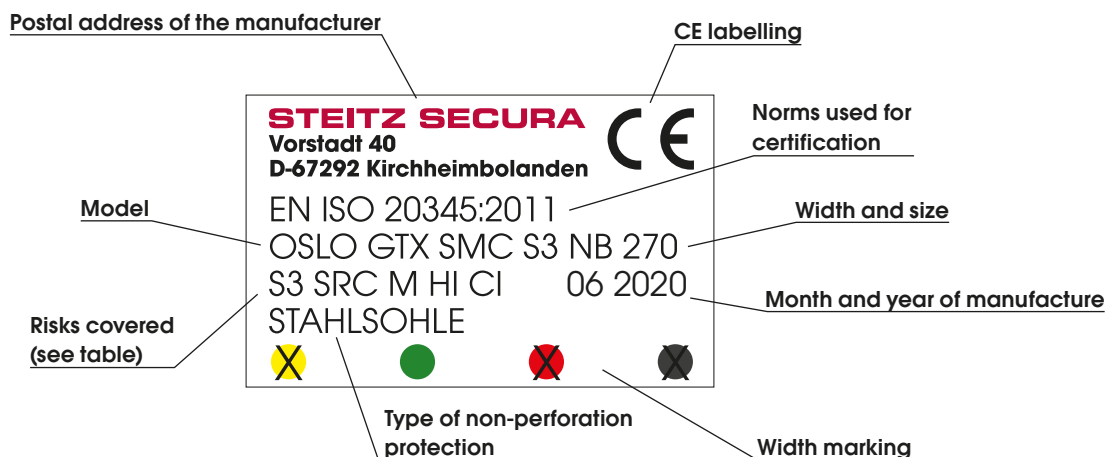

STEITZ SECURA's safety and occupational shoes all comply with the protection from risks of Category II, some special models even with Category III. These include a. o. firemen boots or shoes with integrated cutting protection.

Symbol	Risk covered	Requirement and fulfilled limit values	Category

		ESD protection against electrostatic discharge according to DIN EN IEC 61340-4-3								
X: Meets specified requirements O: Requirement can be met. Please note the details on the shoe. SRA or SRB or SRC must be met.										

LABELLING.

THE FLAP STICKER.

If you take a look on the backside of the flap in the shoe, you will find all relevant information you need for categorization. This data is binding and shall help to determine the type of safety class danger of the respective use.

PRO-ACTIVE, PRODUCT, PROTECTION.

DIN EN 61340-4-3 – THE PROTECTION NORM

Electro-static discharges are the enemies of sensitive electronic components. In the worst case, voltage punctures produced by them can lead to the destruction of components or the ignition of highly flammable substances.

By respecting the norm in our safety shoes, we undertake to keep the imposed ESD thresholds values. This is proactive product protection.

We test the resistance values of our models according to the more demanding method of DIN EN 61340-4-3. For this purpose, the discharge capacity of the safety shoe is confronted with a defined extreme climate situation. For temperature and humidity each have a strong impact on electric resistance.

The ESD models are tested in a range of electrical resistance between 100 Kiloohm and 100 Megaohm.

The individual sole series have been tested by notified testing institutes in the form of a type examination according to EN 61340-4-3 (with 12%±3 residual moisture at 23°C). After production, 100% of the shoes are tested to guarantee this resistance value without any compromise.

The measuring procedure is conceived by reference to the norm EN 61340-5-1 (workplace measurement). The upper limit defined here is 35 Megaohm. So all ESD models have electro-static discharge capacity.

You can find the ESD labelling well visible on the inside tongue of our models.

STEITZ FLEXO

We have equipped some of our new models with the new STEITZ FLEXO closure system as a standard. Set up once, the individual fit of your safety shoe is guaranteed forever. Day after day. Without time-consuming lacing.

What is much more important is to avoid trips and falls risks due to open laces. For us, this is the logical connection between comfort and protection. Typical for STEITZ SECURA.

Do you prefer conventional lacing? No problem. Classical laces are included with each shoe.

The following models are equipped with STEITZ FLEXO:

CP 4100 ESD

CP 4210 ESD

CP 4300 ESD / CP 4300 SF

JULIA

FRIEDA

Our STEITZ FLEXO closure system is also available as accessory article for laced low-shoe models. You can find additional information on page 101.

THE BENEFITS AT A GLANCE:

- ✓ Flexible and robust rubber lacing
- ✓ Individually adaptable
- ✓ Always constant lacing intensity
- ✓ Simplifies and accelerates the procedure of taking the shoe on and off
- ✓ Reduces the risk of a potential trip hazard
- ✓ Brilliantly suitable for works on turning machines

You can find additional details about FLEXO directly here: <https://steitzsecura.com/flexo>

DOES YOUR SHOE HAVE TO BE METAL FREE?

There are uses in which a safety shoe should not contain any metal – e. g. in the area of safety controls at the airport. In order not to activate the metal detectors, we have equipped our metal free models with a textile puncture resistance and the proven composite toe protection cap. A light, flexible shoe for your safety without any metal.

You can find many of the models in the different categories. Just look for this symbol.

PERFECT NEW SOLUTION FOR COMPLETE PROTECTION.

TEXTILE PUNCTURE RESISTANCE WITH VITAL BACK SYSTEM

We combine our proven SECURA VARIO heel shock absorption system with a metal free puncture resistance. This yields VARIO FLEX. Just look for this symbol.

In some areas of use, a light textile puncture resistance in the shoe is highly useful. But do you also know the benefits of our weight-dependent SECURA VARIO® system?

Now we have united both advantages and developed the VARIO FLEX system. With a simple lifting mechanism, you can lift the textile insole in the heel area and exchange the integrated damping module as usual. So we offer you the ideal solution. Individual damping combined with puncture resistance.

Of course, our VARIO FLEX technology is DGUV-certified and absolutely safe. As usual, a thought out STEITZ SECURA quality.

You can find the new VF models on page 89.

ARE YOU LOOKING FOR SOLES SPECIFICALLY DESIGNED AND TESTED FOR SPECIFIC AREAS AND SURFACES?

Different sole profiles and materials help to optimally adapt your safety shoe to your area of use. So we offer light, flexible outsoles made of thermoplastic polyurethane (TPU) with high abrasion resistance and good slip resistance (heat-resistant up to ca. 120°C). In addition, particularly robust cut and heat resistant (up to ca. 220°C) soles made of nitrile rubber (perbunan) with very good slip resistance are available.

OUTSOLE TPU COMPETITION

You can find our new COMPETITION models from page 40 on.

Dynamic design in sneakers look

Chamfered heel element to avoid trip hazards

TPU SOLES MADE OF THERMOPLASTIC POLYURETHANE

Light, flexible outsoles made of thermoplastic polyurethane (TPU) with high abrasion resistance, good slip resistance and heat resistance up to approx. 120°C

TPU COMPETITION

3.0 MM PROFILE

Outsole with increased protection from ankle twisting, reduces lever arms, weight-reduced sole construction, damping structure in heel area, very good abrasion and slip resistance, heat-resistant up to approx. 120 °C.

TPU ACTIVE

3.0 MM PROFILE

Outsole with increased protection from ankle twisting, reduces lever arms, supports the natural movements, flexion zone with pivot, light and flexible, very good abrasion and slip resistance, heat-resistant up to approx. 120°C.

TPU ATHLETIC

3.5 MM PROFILE

Outsole with increased protection from ankle twisting, reduces lever arms, supports the natural movements, light and flexible, very good abrasion resistance and excellent slip resistance, heat-resistant up to approx. 120°C.

TPU CX FLEX

2.6 MM PROFILE

Weight-reduced sole construction with tapered joint area, flexion zone with pivot, damping structure in heel area, very good abrasion and slip resistance, heat-resistant up to approx. 120°C.

TPU DYNAMICS

2.6 MM PROFILE

Light, flexible outsole made of soft TPU with tapered joint area, flexion zone with pivot, damping structure in heel area, very good slip resistance, heat-resistant up to approx. 120°C.

TPU LS PROFESSIONAL

2.6 MM PROFILE

Elegant business outsole, slightly profiled, very good abrasion resistance, heat-resistant up to approx. 120°C.

TPU SOLES MADE OF THERMOPLASTIC POLYURETHANE

Light, flexible outsoles made of thermoplastic polyurethane (TPU) with high abrasion resistance, good slip resistance and heat resistance up to approx. 120°C

TPU SKATER
2.8 MM PROFILE

Outsole with increased protection from ankle twisting, reduces lever arms, supports the natural movements, light and flexible, very good abrasion and slip resistance, heat-resistant up to approx. 120°C.

TPU VX
3.0 MM PROFILE

Outsole with broad stepping surface, flexion zone with pivot, good abrasion and slip resistance, heat-resistant up to approx. 120°C.

TPU WOMAN BUSINESS
2.0 MM PROFILE

Elegant business sole for women with tampered joint area, slip-resistant, good abrasion resistance, heat-resistant up to approx. 120°C.

TPU WOMAN SPORT
3.0 MM PROFILE

Light and flexible sport sole for women with tampered joint area, very good slip resistance, good abrasion resistance, heat-resistant up to approx. 120°C.

PERBUNAN SOLES MADE OF NITRILE RUBBER

Highly robust, cut and heat resistant soles (up to 220°C) with very high slip-resistance and excellent resistance against acids and lyes.

PERBUNAN ACTIVE
4.1 MM PROFILE

With increased protection from ankle twisting, reduces lever arms, good acid and lye resistance, broad stepping surface, high wear resistance, heat-resistant up to approx. 220°C.

PERBUNAN ALPINE
6.5 MM PROFILE

Robust, rough-profile sole with good abrasion and cut resistance, broad stepping surface, good acid and lye resistance, heat-resistant up to approx. 220°C.

PERBUNAN ATHLETIC
3.8 MM PROFILE

Anti-slip sole for smooth and oily floors, with increased protection from ankle twisting, reduces lever arms, very good abrasion resistance, heat-resistant up to approx. 220°C

PERBUNAN DYNAMICS
2.6 MM PROFILE

Weight-reduced sole construction with tampered joint area, flexion zone with pivot, damping structure in heel area, very good abrasion and slip resistance, heat-resistant up to approx. 220°C.

PERBUNAN VX
3.8 MM PROFILE

Robust outsole with flexion zone with pivot, good abrasion and slip resistance, very good acid and lye resistance, heat-resistant up to approx. 220°C.

ARE YOU LOOKING FOR LIGHT WEIGHT SHOES WITHOUT COMPROMISING ON TECHNOLOGY?

VARIO DYNAMICS® PRO

For all those who must stand and walk around a lot at work and want to combine safety with wearing comfort: the VARIO Dynamics® Pro models are extremely lightweight and particularly breathable thanks to microfiber, and they convince with their sporty look. This look is also supported by the Athletic sole – it is flexible and keeps the shoes extremely lightweight. In addition, an optimal climate comfort is provided by the real leather insole. Ideal for strenuous working days in production or assembly.

FEATURES

Basic-Features:

- ✓ VARIO Multiflex®
- ✓ Multi-width system
- ✓ Aluminum toe cap
- ✓ Protection against electrostatic discharge (ESD)
- ✓ Dust guard tongue

Optional:

- ✓ Toe guard
- ✓ BOA® FIT SYSTEM
- ✓ Velcro fastening straps
- ✓ Seamless shoe design

Award-winning design

ESD according to DIN EN 61340-4-3

Fitting system

Modern, seamless construction provides comfortable wearing sensation

Unbeatable comfort

Light, but extremely robust protective aluminum toe cap

Lever-arm-reduced construction actively protects from ankle-twisting accidents

Foot climate technology

Breathable microfiber material mix for a shoe weight as light as a feather

Vital back system

PASSIONATE
ABOUT PERFECTION.

STRIVE FOR THE BEST.

VARIO REBOUND THE NEW STEITZ TECHNOLOGY.

VARIO REBOUND

You want more than unique, weight-adapted heel shock absorption?

Here you are: our SECURA-VARIO® technology – now with intelligent rebound properties.

You can expect a revolution in soles!

How can you combine functions with each other which are actually contradictory?

On one hand, the following properties are important in every step movement:

- **Stability** • **Roll-over properties** • **Comfort**

On the other hand, the individual, weight-adapted damping in the heel area has the highest priority for us. This sustainably saves the back. Thanks to the scientifically validated, weight-dependent heel shock absorption SECURA VARIO®, which has proven millions of times, our engineers and designers had the required technical advance to elaborate the perfect combination of rebound properties and individual damping performance: they gave birth to the unique **VARIO REBOUND** technology.

The principle:

Optimal damping in the heel area and effective return of energy in the forefoot – for you, this means: maximum comfort plus stability.

Our special shoe construction reduces lever arms.

This provides your foot with maximum stability in the shoe and tangible relief.

We at STEITZ SECURA are very proud of these unique characteristics.

Shoes with the **VARIO REBOUND** technology are marked with the following symbol:

THE REVOLUTION IN SOLES – VARIO REBOUND:

You can find additional details on VARIO REBOUND directly here: <https://steitzsecura.com/en/variorebound>

YOUR BENEFITS

- ✓ High energy return rate leads to reduced effort in every step
- ✓ Excellent weight-adapted damping properties
- ✓ Wear-free sole technology and long-lasting quality
- ✓ Reduced weight due to low material density
- ✓ Free from material fatigue and therefore longer lifetime
- ✓ Unchanged comfort properties down to -25°C
- ✓ Free from solvents and silicone, therefore suitable for allergy sufferers

THE COMBINED REBOUND EFFECT – WALKING ECONOMY ON A TOTALLY NEW LEVEL.

The newly developed midsole material with rebound effect returns a very high part of the energy spent by the wearer. Thanks to that, the wearer experiences a considerable reduction of muscle fatigue - even over long distances or a long working day. In addition, the outsole made of soft TPU optimizes the power transmission in the step sequence.

Phase 1:

Weight-adapted damping in heel area by the SECURA VARIO® System.

Phase 2:

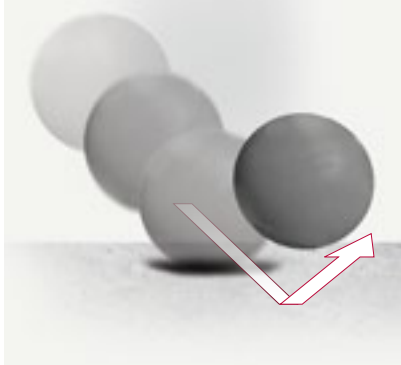

Even charge spreading over the whole walking area.

Phase 3:

Roll-over movement via the forefoot, the metatarsophalangeal joint and the big toe. Here, the rebound material in the midfoot and forefoot area supports the lever force for the next step.

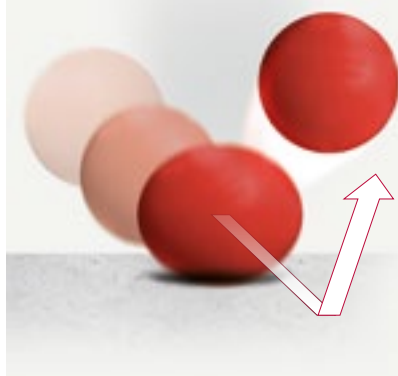

STANDARD SOLE MATERIAL

REBOUND SOLE MATERIAL

- Higher energy return
- Higher damping effect
- Lower weight
- More flexibility

VITAL BACK SYSTEM WITH REBOUND:

With the ultra-modern multi-section-injection procedure, we have managed to integrate rebound material into the sole in the midfoot and forefoot area. While in the heel area, proven standard PU material stabilizes and absorbs the energy at the heel touchdown. Combined with the SECURA VARIO® system, this achieves optimal damping and a safe stance.

ARE YOU LOOKING TO UPDATE YOUR STYLE TO OUR NEW LIGHT WEIGHT, SNEAKERS DESIGN?

COMPETITION

Our new COMPETITION range aims at achieving the best performance. Wearing comfort on a totally new level, the unique vital back system, Steitz' fitting method and the exclusive foot climate technology will support you with our new **VARIO REBOUND** technology. The additional features of the COMPETITION series also set new standards: an extra-flat and extremely robust asymmetric protective toe cap made of composite materials for new freedom for your toes. Innovative high-tech-upper materials, combined with the newly designed anti-slip outsole. This is fashionable safety - Made by STEITZ SECURA. So we combine lightness with our unsurpassed comfort and sporty statement. These safety shoes show a cool style even after work.

Unbeatable safety with sneakers look!

FEATURES

Basic-Features:

- ✓ Multi-width system
- ✓ Composite toe cap
- ✓ VARIO REBOUND Technology

Optional:

- ✓ BOA® FIT SYSTEM
- ✓ STEITZ FLEXO closure system
- ✓ Textile puncture-resistant midsole SECURA FLEX

**FOOTWEAR THAT
DOESN'T STAND STILL.**

STRIVE FOR THE BEST.

DOES YOUR SHOE NEED TO HAVE NON-SLIP PROTECTION?

VARIO FLEX PRO

Does your shoe have to be light, but still offer good stability? This is no contradiction! Our lever-arm-reduced shoes support the natural foot movement and thus also the sure-footedness. So in combination with our VARIO Multiflex® technology, the VX PRO model series offers you a high protection from ankle twisting and, at the same time, a particularly comfortable, sporty walking sensation. Ideal for use e. g. in craft, metal construction and outdoor, thanks to the robust, dirt-rejecting leather surface.

FEATURES

DO YOU NEED EXTREME FLEXIBILITY IN YOUR SAFETY SHOES?

SKATER PRO

Safety whilst still extra light and comfortable: the SKATER-PRO models use innovative materials with minimum weight. The high-quality textile offers much freedom of movement to the foot and provides the best climate control in the shoe. The light wedge sole also supports optimum freedom and a safe stance. This shoe is exactly fitted to the length and width of the individual foot and is above all perfectly suitable for use in craft and logistics. The fit and the unrivalled comfort of these shoes make you quickly forget that you are wearing safety shoes. With this model series with the multi-flexible wedge sole, we now have a shoe in sneaker style that has no compromise compared to a leisure shoe in terms of daily wearing comfort.

FEATURES

Basic-Features:

- ✓ VARIO Multiflex®
- ✓ Multi-width system
- ✓ Aluminum toe cap

Optional:

- ✓ Leather-free and therefore suitable for allergy sufferers

ARE YOU COUNTING YOUR STEPS, OR STOOD STILL FOR MOST OF THE DAY?

VARIO DYNAMICS®

Walking and standing a lot – especially in production, this is part of daily business. The STEITZ FLEX-ZONE® supports the natural roll-over movement of the foot and thus provides for a comfortable walking sensation all day long. The multi-width system and breathable textiles complete the healthy comfort of this model series. The perbunan models of this series are our classics for a robust use in building construction. Whether in S2 or S3 with puncture resistance. Simply unbreakable.

FEATURES

Basic-Features:

- ✓ Multi-width system
- ✓ STEITZ FLEX-ZONE®
- ✓ Leather insole

Optional:

- ✓ Reinforced toe guard
- ✓ Reflective applications
- ✓ Perforated design for optimal ventilation
- ✓ Protection against electrostatic discharge (ESD)

ESD AL 711 PLUS

**INNOVATIVE
AND INSPIRED.**

STRIVE FOR THE BEST.

DO YOU NEED A ULTIMATE COMFORT AND STYLE IN SAFETY FOR LADIES?

WOMEN

Women's feet have special requirements for fit and comfort – therefore, we also have developed a model series specifically adapted to that. Our Ladies collection is even lighter and more flexible and support the natural movement of the foot. Not only that – a last specifically developed for the anatomy of the female foot makes the decisive difference. Whether in the office, in service, in production – or also for leisure: with this, you have a highly comfortable wearing sensation and even benefit from a safe stance. With a classical look or in trendy colors, we have the perfect shoe for every requirement. The outsole „TPU Woman Sport ESD“ has also been developed for that. A sporty, light sole, adapted to the walking anatomy of ladies. Tapered in the joint area for high flexibility and with a new, extremely dirt-rejecting profile structure.

FEATURES

Basic-Features:

- ✓ Multi-width system
- ✓ Leather insole
- ✓ Protection against electrostatic discharge (ESD)
- ✓ Aluminum toe cap

DO YOU NEED FOOTWEAR FOR THE MOST EXTREME CONDITIONS?

WELDING AND FOUNDRY

Casters and welders work at extreme temperatures. Therefore, they need a shoe that can cope with these special challenges. Our models for these professional groups have a clever gutter system to drain hot liquids. In addition, the Quick-Removal-System (QRS) ensures a quick removal of the boot in extreme heat. So you have an optimal protection and can quickly act in urgent cases.

FEATURES

Basic-Features:

- ✓ Multi-width system
- ✓ Vamp-lining made of real leather
- ✓ Leather insole

Optional:

- ✓ SECURA VARIO® heel shock absorption
- ✓ STEITZ FLEX-ZONE®
- ✓ Quick-Removal-System (QRS)
- ✓ Protection against electrostatic discharge (ESD)

VX 7380 PERBUNAN S3

DO YOU NEED FOOTWEAR FOR THE MOST EXTREME CONDITIONS?

FIRE FIGHTERS

Somebody who saves lives needs the perfect equipment – this starts with the feet. With their particularly robust special soles with a 6.5-mm profile, STEITZ SECURA's firemen boots provide the optimal protection even in extreme heat. In addition, their smart GORE-TEX-membrane makes them 100 % waterproof while being breathable. And since an intervention can be very long and strenuous, we have equipped the shoes with a weight- and stress adapted SECURA VARIO® heel shock absorption. It effectively reduces pressure stress on the back and the joints and significantly reduces fatigue symptoms. Additional clever details like zippers, reflecting materials and a donning aid also contribute to functionality.

FEATURES

Basic-Features:

- ✓ Multi-width system
- ✓ Leather insole
- ✓ Reinforced abrasion-resistant toe guard

Optional:

- ✓ SECURA VARIO® heel shock absorption
- ✓ Heel bend for better buckling behavior
- ✓ Secura Care insole with heel cushioning

EXTREME
 CONDITIONS

DO YOU NEED FOOTWEAR FOR THE MOST EXTREME CONDITIONS?

WINTER

Warm feet in extreme cold: when you are walking at minus temperatures, you need a good and safe protection against the cold. What you need here are STEITZ SECURA's winter models. They have a high-quality woven lamb lining that warms up with its excellent thermal isolation without making the feet sweat. The outsole plays an important role here. It consists of a cool-flexible mix of materials that resists extreme temperature variations. Thanks to the extreme slip protection and a perfect fit with our multi-width system, you move surefooted over ice and snow.

FEATURES

Basic-Features:

- ✓ Multi-width system
- ✓ Dust guard tongue
- ✓ Cold-flexible sole design

Optional:

- ✓ SECURA VARIO® heel shock absorption
- ✓ STEITZ FLEX-ZONE®
- ✓ Protection against electrostatic discharge (ESD)
- ✓ Leather insole

ARE YOU LOOKING FOR THE ULTIMATE IN COMFORT METATARSAL PROTECTION?

SECURA META COVER

Are you subject to an increased risk of injuries due to falling objects at work? Then our SMC shoes with midfoot protection offer you protection and comfort. The light and extremely flexible protection with its open-pore memory foam ensures an effective impact protection for the midfoot area.

FEATURES

Basic-Features:

- ✓ Metatarsal protection SECURA META COVER (SMC)
- ✓ Multi-width system
- ✓ Reinforced toe guard
- ✓ Puncture resistance

Optional:

- ✓ Protection against electrostatic discharge (ESD)
- ✓ STEITZ FLEX-ZONE®
- ✓ GORE-TEX-membrane-system
- ✓ Leather insole
- ✓ SECURA VARIO® heel shock absorption

**FLEXIBLE MIDFOOT PROTECTION
SECURA META COVER (SMC)**

Soft and extremely flexible surface that immediately hardens in case of an impact, thus effectively protecting the upside of the foot.

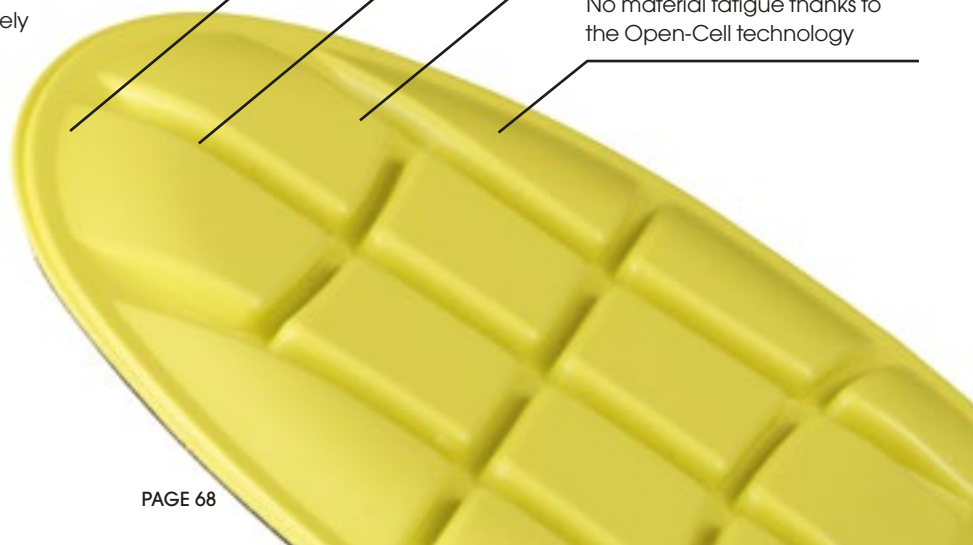

Secura Meta Cover fulfills the additional requirements of the EN norms for midfoot protection.

Absorbs up to 90% of the impact energy

An efficient and effective midfoot protection in every situation

Flexible and light as a feather for more comfort

No material fatigue thanks to the Open-Cell technology

PERFECTION
IN EVERY DETAIL.

STRIVE FOR THE BEST.

DO YOU NEED SAFE AND STYLISH SHOES FOR THOSE CLINICAL ENVIRONMENTS?

WHITE

The upper material of STEITZ SECURA's white models is easy to clean, fulfills the highest standards and supports the climate comfort in the shoe. The anti-slip outsole with the weight- and stress-adapted SECURA VARIO® heel shock absorption provides for a good stance. High-quality materials and a thought-through technology to save the back and the joints – that's how you will comfortably and safely cope with even long working days. Next to the requirements for foot safety, hygiene is key in the clinical areas. Modern, smooth upper materials, whether made of microfiber or smooth leather, make sure that as little dirt as possible will adhere. Thanks to the clever sole profiling, cleaning and disinfection sessions become a child's play. In fine chemistry, food production, industrial kitchens, or even the caring profession and clinical environments: our safety shoes are the right choice.

CLINICAL ENVIRONMENTS

ARE YOU LOOKING FOR LIGHT WEIGHT TEXTILE PUNCTURE RESISTANCE?

TEXTILE PUNCTURE RESISTANCE

If you need a textile puncture resistance shoe, but place great value on a low weight, you are exactly right here. STEITZ SECURA's textile puncture resistance simultaneously offers comfort and flexibility: the dense multi-layer textile in the midsole offers a high safety level and leads to a very low shoe weight. These are multi-task models. In interior construction or with extremely slip-protected sole and BOA®FIT SYSTEM on the scaffold: always safe, light and fantastically flexible.

You can find a general overview of our S3 models, with the option of steel or textile puncture resistance, on the pages 109 to 111.

FEATURES

Basic-Features:

- ✓ Textile puncture-resistant midsole SECURA FLEX
- ✓ Multi-width system

Optional:

- ✓ BOA® FIT SYSTEM
- ✓ Velcro fastening strap
- ✓ Protection against electrostatic discharge (ESD)

TEXTILE PUNCTURE RESISTANCE

ARE YOU LOOKING FOR LIGHTWEIGHT TEXTILE PUNCTURE RESISTANCE BUT WITH VITAL BACK SYSTEM?

VARIO FLEX

The new VARIO FLEX technology unites a textile puncture resistance with our exclusive vital back system. Experience both benefits in one shoe. Weight-adapted heel shock absorption with maximum protection. Of course, DGUV-certified and safety without compromise.

FEATURES

Basic-Features:

- ✓ VARIO FLEX Technology
- ✓ Multi-width system
- ✓ Aluminum toe cap
- ✓ Protection against electrostatic discharge (ESD)

Optional:

- ✓ BOA® FIT SYSTEM
- ✓ Velcro fastening strap

VARIO FLEX PUNC-
TURE RESISTANCE

ARE YOU LOOKING FOR THE ULTIMATE BREATHABILITY WITH COMPLETE WATERPROOF PROTECTION?

GORE-TEX

Do you often switch from inside to outdoor work, and are you exposed to different temperature and weather influences? Then we recommend STEITZ SECURA's water-proof and breathable GORE-TEX models. Their membrane makes sure that excess moisture and heat are quickly conducted outward. All water-vapor-permeable and hydrophobized upper materials also contribute to the optimal wearing comfort. For a pleasant climate in the shoe and the wearer.

GORE-TEX Extended Comfort Footwear

- Durably waterproof and highly breathable
- Non insulated for high heat loss

Dry and comfortable in warm temperatures

FEATURES

Basic-Features:

- ✓ GORE-TEX-membrane-system
- ✓ Dust guard tongue
- ✓ Multi-width system

Optional:

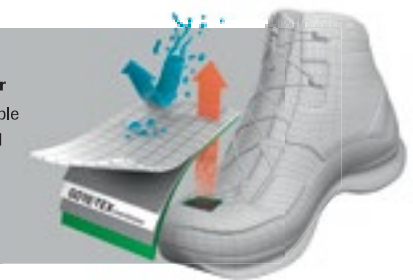

- ✓ STEITZ FLEX-ZONE®
- ✓ Reinforced toe guard
- ✓ Reflective applications
- ✓ Puncture resistant steel midsole

GORE-TEX Performance Comfort Footwear

- Durably waterproof and breathable
- Moderately insulated for a broad range of temperatures

Dry and comfortable in moderate temperatures

GORE-TEX Insulated Comfort Footwear

DO YOU NEED SPECIFICALLY TAILORED SAFETY FOOTWEAR, TO MEET INDIVIDUAL NEEDS?

STEITZ MED

STEITZ MED PERMITS AN INDIVIDUAL SUPPLY OF SHOES AND INLAYS

In addition to the four different widths and the weight- and stress-adapted SECURA VARIO® heel shock absorption, STEITZ Med offers individual solutions, from the extra-wide protective toe cap and type-tested shoe adjustments to the supply of orthopedic inlays and medical consulting and training. In problem solving and product development, our team is supported by Dr. med. Karl Matheis, specialist for general and occupational medicine.

The type-tested orthopedic inlays can optionally be supplied on the basis of the original insole or with the inlays of our partners. In this context, we ensure the individual consulting and adjustment of the shoe inlay system to the needs of the wearer in compliance with DGUV Rule 112-191 via a comprehensive network of orthopedic shoe technicians.

You can find more information in our STEITZ Med information brochure.

DGUV RULE 112-191? WHAT IS THAT?

The modification of the trade association's directive DGUV Rule 112-191, which has become effective in May 2014, states that in every orthopedic adjustment of safety shoes, it must be tested if they still comply with the requirements of the norm EN ISO 20345. Therefore, orthopedic adjustments must be exemplarily tested and certified by an official testing institute. The production of the

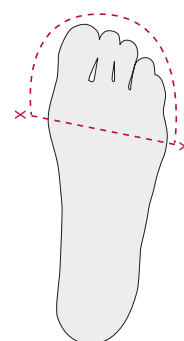

individually adjusted shoes then follows a precise processing prescription using the structural materials and glues specified by the manufacturer and officially authorized. In case of a supply of inlays, the orthopedic inlay must also be tested in connection with the shoe. An inlay blank tested like that can then be adapted to the individual needs of the wearer.

CUSTOM-MADE PRODUCTS

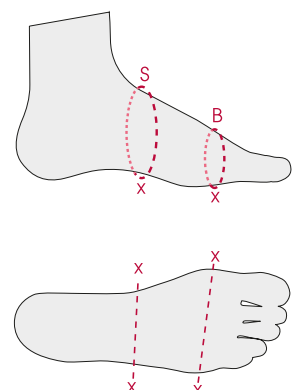

If the series width XXB (extra-extra wide) is not sufficient or if an extreme width is needed in the forefoot (e. g. in case of foot diseases like hammer toe or hallux valgus),

shoes can be custom-made individually. Your orthopedist, orthopedic shoemaker or our sales force can help you to determine the required measures.

Extreme forefoot width

Extreme instep height

Outsole: TPU Jura Ortho ESD, anthracite
Cushioning: Universal shock absorption

Full-grained, easy-care smooth leather, collar made of textile, seamless and cushioned inner lining made of microfibre, dust guard tongue, replaceable comfort insole ORTHO-MED ESD

Available in Perbunan version up to Size 48:
MED 1600 PERBUNAN

DO YOU NEED ACCESSORIES TO ENHANCE YOUR FOOTWEAR.

THERMO REALIZER

ITEM NO. Z51000

The selection of the right foot bed insole should be as specific as the individual foot of the shoe wearer. The THERMO REALIZER is an innovative way to provide individual foot bed advice.

The person stands for five seconds (in socks) on the Thermo Realizer. The body heat generated creates a print showing the stressed zones of the foot. This footprint is compared with the sketches shown next to it, showing you directly which insole is required.

Content: Thermo Realizer, microfibre cloth, disinfectant spray, manual

INSOLE ORTHO-SOFT ESD

SIZES: 35 - 48

Foot-form adjusted insole with individually selectable support of the longitudinal arch. Washable up to 30°C, do not dry in the dryer.

The anatomically shaped soft foam footbed supports the damping throughout the walking area and discharges sensitive pain and pressure points. The insole is suitable for ESD shoes.

HIGH (ITEM NO. Z25600)

Pronounced support of the longitudinal arch. Particularly suitable for the high-arch foot.

HIGH

MEDIUM (ITEM NO. Z25700)

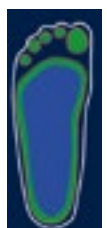

Pronounced support of the longitudinal arch. Particularly suitable for the normal and flat foot.

MEDIUM

LOW (ITEM NO. Z25800)

Only slight support of the longitudinal arch. Particularly suitable for the flat foot.

LOW

INSOLE ERGO-SOFT ESD

ITEM NO.: Z25400

SIZES: 35 - 52

The soft-foam comfort insole supports absorption throughout the entire contact surface and ensures a comfortable fit.

Washable up to 30 °C, do not tumble dry.

INSOLE ERGO-COOL® ESD

ITEM NO.: Z25300

SIZES: 35 - 48

The cushioning grid structure of the full-length comfort insole ensures air circulation and thereby optimum climate comfort.

Washable up to 30 °C, do not tumble dry.

INSOLE WOMEN BUSINESS ESD

ITEM NO.: Z25410

SIZES: 35 - 42

The soft-foam comfort insole supports absorption throughout the entire contact surface and ensures a comfortable fit.

Washable up to 30 °C, do not tumble dry.

STEITZ FLEXO

ITEM NO. BLACK: Z86100

ITEM NO. RED: Z86110

With the flexible, individually adjustable rubber lacing STEITZ FLEXO, potential stumbling hazards due to open laces are avoided, and the safety shoe always has a constant lacing intensity. In addition, the closure system accelerates the procedure of taking the shoe on and off and is brilliantly suited for works on turning machines.

Instructions for lacing can be found here: steitzsecura.com/flexo

SHOE HYGIENE SPRAY BOTTLE S.H. FRESH

ITEM NO.: Z32100

CONTENT: 100 ML CARE SOLUTION

Alcohol-free maintenance solution „s.h. Fresh“ developed by Dr. med. Karl Matheis, protects against bacteria, prevents athlete's foot and deodorises with a clean, fresh scent.

WALL SPRAY DEVICE FOR SHOE HYGIENE SOLUTION

WALL SPRAYER: ITEM NO.: Z31000

SOLUTION (1 L): ITEM NO.: Z32200

Wall-mount device with stainless steel spray head for consistent and regular inner shoe care. Apply 1-2 sprays of the shoe hygiene solution „s.h. Fresh“ into the shoe daily, after wear, for a fresh and hygienic shoe.

FLORAL SHOE POLISH

1 L CONTAINER: ITEM NO.: Z41130

125 ML TUBE: ITEM NO.: Z41120

High-quality floral shoe polish (highest quality level according to BW-TL8030-0017) for wax-based leather care and impregnation. Maintains the breathability of membranes (such as GORE-TEX). Leather shoes cleaned with Floral shoe polish are proven to maintain a long-term climate regulating function under extreme weather conditions.

ROHNER FUNCTIONAL SOCK FIBRE LIGHT SUPER

ITEM NO. BLACK: Z11100

ITEM NO. BLUE DENIM: Z11400

The functional sock supports natural moisture regulation and is also specially suited for shoes with GORE-TEX® laminate. The patented knitting pattern of the anti-slip tube-form ensures that the sock adapts to the leg.

SIZES:

S (36 - 38)

M (39- 41)

L (42 - 44)

XL (44 - 46)

XXL (47 - 49,

only applies to Z11100)

SIZING KIT MEN / WOMEN

ITEM NO.: Z50001 MEN
 ITEM NO.: Z50005 WOMEN

Mould measuring system for simple and reliable determination of optimal shoe size and width. With multilingual instructions.

SIZING KIT MEN (GR. 39 - 47)
 SIZING KIT WOMEN (GR. 36 - 42)

MOBILE SIZING KIT TROLLEY

ITEM NO.: Z50002

With the mobile trolley, it is easy to transport the mould measuring system (including women's and men's measuring moulds).

MOULD MEASURING SYSTEM MEN (SIZE 39 - 47)
 MOULD MEASURING SYSTEM WOMEN (SIZE 36 - 42)

Shells with a different width per shoe length differently reflect the volume of shoes with a different width. The bearer experiences the same conditions as in the original shoe. Compared to the shoe trial fitting, time spent and the risk of exchange are sensibly reduced.
